Re: Asbestos Survey 928, 932, & 938 Broadway Ave., and Adjoining Alley Building, Lorain, Ohio

Dear Ms. Crow,

At your request, on Monday, October 27, and Tuesday, November 11, 2014, HazCorp Environmental Services, Inc. performed an asbestos inspection at the above-referenced properties.

It is our understanding, through information available on the Lorain County Auditor's Office Website that the buildings are owned by Mr. Mark D. Clodwick. The buildings were erected in the late 1920's.

These addresses comprise a large portion of the buildings on the block where they are located. When conducting the survey it was our understanding that 936 Broadway Ave. and the building located on the alley are both going to be demolished. Whereas the rear of both 928 and 932 Broadway are to be partially demolished, with the front 2/3rds of each building to be remodeled.

The United States Environmental Protection Agency National Emission Standards for Hazardous Air Pollutants regulations are the primary regulations governing asbestos-containing building materials in the United States as found within 40 CFR Part 61, Subpart M. Asbestos is recognized as a Hazardous Air Pollutant under these regulations. All friable asbestos-containing materials or non-friable materials that may become friable during the demolition or renovation process must be removed prior to these actions being undertaken.

The Ohio EPA also has regulations found in the Ohio Administrative Code (OAC) 3745-20. These pertain primarily to demolition and renovation.

805 Capital Commons Drive Toledo, Ohio 43615 Telephone (419) 537-6000 Fax (419) 537-8774

The inspection was also done to comply with the Occupational Safety and Health Administration asbestos standard for the construction industry (29 CFR 1926.1101) and the Ohio Department of Health Regulations found in OAC 33701-34.

Licensing of individuals involved in asbestos inspections, air monitoring, project design, and removal of regulated asbestos-containing materials in the State of Ohio is regulated by the Ohio Department of Health.

The collection of samples was done to comply with the Asbestos Hazard Emergency Response Act found in 40 CFR 763 Subpart E and the Ohio Department of Health Regulations previously cited.

The inspection was performed by a Certified Asbestos Hazard Evaluation Specialist licensed through the Ohio Department of Health.

#### General Description of the Buildings

The inspected buildings are large former retail/commercial structures with residential apartments on the second floors; currently they are vacant.

#### 936 Broadway

This building is located closest to the paved driveway. It is two-stories with a basement. The main floor appeared to have been utilized as a showroom. The main part of 936 had two (2) modular offices in the front portion with a display type area in the very front. The rear addition was utilized for offices and storage. The 2<sup>nd</sup> floor of this building was utilized as a large apartment. The basement was flooded, but empty.

The following suspect asbestos containing materials were assessed and sampled:

805 Capital Commons Drive Toledo, Ohio 43615 Telephone (419) 537-6000 Fax (419) 537-8774

### Main Floor (1st Floor)

- Hard plaster with texture on vestibule ceiling (HA 30; 120 SF; intact),
- 9" floor tile under carpeting (HA 31; 1,650 SF, intact),
- Leveling compound under wood flooring (HA 32; 440 SF; intact), and
- Mastic on wood tile (HA 33; 440 SF; intact).

### 2<sup>nd</sup> Floor Apartment

- Hard plaster with texture throughout 1<sup>st</sup> and 2<sup>nd</sup> floor (HA 34; 10,610 SF, intact),
- Drywall-joint compound throughout 2<sup>nd</sup> floor on walls (HA 35, 3,200 SF, intact),
- Drywall with knockdown finish, north wall of living room and hall (HA 36, 960 SF, intact),
- Popcorn ceiling material in living room and hall (HA 37; 1,200 SF, intact), and
- Textured ceiling material throughout rest of apartment (HA 38; 1,440 SF, mostly intact with some damage).

There is some non-friable, non-suspect, rubber-backed linoleum in the bathrooms of the apartment that were not sampled. This is new material and does not contain asbestos.

No other materials historically manufactured with asbestos were identified.

#### 932 Broadway

This building is located between 936 and 928 Broadway. This address is the largest of the three on Broadway. The first floor was utilized for offices in the northern half and showroom in the southern half. There is a glassed-in showroom in the southeast corner of the 1<sup>st</sup> floor that was only accessible by knocking a hole through a partition wall. The rear of the first floor was used for storage. The 2<sup>nd</sup> floor was a showroom for a former furniture store. The basement was storage. A boiler room was located within the basement. Asbestos aircell insulation is found on piping runs in the basement. The fittings are mudded asbestos cement.

The following suspect asbestos containing materials were assessed and either sampled or presumed to contain asbestos:

#### Basement

- Aircell asbestos insulation (PACM; 110' x 8" diam., intact),
- Drywall ceiling on the north half (HA 1; 2,135 SF; intact),
- Hard plaster ceiling on south half (HA 2; 2,140 SF; intact),
- Floor tile/mastic beneath carpet on north half (HA 3; 2,135 SF, intact),
- Floor tile/mastic beneath carpet on south half (HA 4; 2,140 SF, intact), and
- Caulk material applied to the boiler (HA 5; <1 CF, intact).

### Main Floor (1<sup>st</sup> Floor)

- Drywall-joint compound on walls in office area and show room (HA 16; 9,000 SF; intact),
- Carpet mastic in front entry (HA 17; 250 SF; intact),

805 Capital Commons Drive Toledo, Ohio 43615 Telephone (419) 537-6000 Fax (419) 537-8774

- Tan flooring with burlap and mastic by stairs and on entire 2<sup>nd</sup> floor (HA 18; 4,725 SF; intact),
- Carpet and mastic throughout, (HA 19; 3,825 SF; intact),
- Mastic under parquet flooring (HA 20; 450 SF; intact),
- Square pattern linoleum in front office and glassed-in showroom (HA 21; 300 SF; intact),
- Wood pattern linoleum beneath carpet along mid-line of unit (HA 22; 650 SF; intact),
- Exterior window glaze on ten windows (HA 23; 1 CF; mostly intact with some damage),
- 2x2' ceiling panels {not installed for disposal} (HA 24; 600 SF; intact),
- Drywall partition wall by glassed-in showroom (HA 41; 264 SF; intact),
- Caulk around rear door openings (HA 43; <1 CF, intact), and
- Aircell pipe insulation and debris on piping in rear garage (PACM; 3 LF, intact).

### 2<sup>nd</sup> Floor

- Hard plaster on exterior walls and ceilings of 1<sup>st</sup> and 2<sup>nd</sup> floor, original building, (HA 25, 15,450 SF; mostly intact with some damage to 2<sup>nd</sup> floor ceiling),
- Linoleum runner to unit 928 (HA 26; 300 SF; intact),
- Interior window glaze/caulk on glass block windows (HA 27; <1 CF; intact),</li>
- Drywall partition walls on showroom floor (HA 42; 4,000 SF; intact).

### 2<sup>nd</sup> Floor Addition

- Hard plaster on ceiling and walls (HA 28; 2,625 SF; walls intact, damaged ceiling)
   and
- Textured paint on Styrofoam (HA 29, 675 SF; intact).

No other materials historically manufactured with asbestos were identified.

### 928 Broadway

This building is located next to 932 Broadway. The front portion of the main floor of this structure was utilized as a small shop. The front of the unit has a small sales counter and display area. Behind the sales area are offices. The rear of the building was utilized for storage. Half of the 2<sup>nd</sup> floor was utilized as an apartment the other half was utilized as part of the furniture store. This structure also had a basement that was utilized for storage.

The following suspect asbestos containing materials were assessed and either sampled or presumed to contain asbestos:

#### Basement

• Electrical panel with black Transite material (PACM; 6 SF, intact).

### Main Floor (1<sup>st</sup> Floor)

- Drywall-joint compound on walls throughout (HA 6; 2,160 SF; intact),
- 2x4' ceiling panels (HA 7; 770 SF; intact), and
- Linoleum beneath non-friable "Peel n' Press" floor tile (HA 8; 770 SF; intact).

805 Capital Commons Drive Toledo, Ohio 43615 Telephone (419) 537-6000 Fax (419) 537-8774

#### Main Floor Addition

Fire door insulation located in door between 928 & 932 (HA 10; 21 SF; intact).

### 2<sup>nd</sup> Floor Apartment

- Hard plaster on walls and ceilings throughout (HA 11; 4,560 SF; intact),
- Linoleum in hall to store (HA 12; 70 SF; intact),
- Linoleum in kitchen (HA 13; 150 SF; intact),
- Linoleum in bathroom (HA 14; 40 SF; intact), and
- Kitchen sink coating (HA 15; 2 SF; intact).

### 2<sup>nd</sup> Floor Addition

Drywall joint compound on north and west walls (HA 9; 1,275 SF; intact).

No other materials historically manufactured with asbestos were identified.

### Alley Building

This building is located on the alley at the rear of the Broadway buildings. This building was filled to the seams with items stored by the owner and the flooring on the  $2^{nd}$  floor was not safe to walk on. The ceiling on the  $2^{nd}$  floor is clad with flat metal 2 x 4 tiles. This ceiling was not inspected thoroughly due to unsafe conditions. The ceiling on the main floor was drywall with textured paint. There is no basement in this structure. We could not get to the room at the rear of this building because there were so many items on the floor. Once all of the items are removed the back room should be inspected.

The following suspect asbestos containing materials were assessed and sampled:

- Drywall ceiling with textured paint (HA 39; 800 SF; intact) and
- Window/door Caulk material on 34 blocked-in openings (HA 40; 2 CF; intact).

### **Elevator Doors and Components**

In the past elevator doors were often lined with asbestos insulation. In addition, the elevator brake shoes and panels where the elevators electric components are installed may have been made using asbestos. We did not attempt to determine whether asbestos was used in construction of this elevator as it appeared that the elevator was in an area of the building that is not slated for demolition.

### Roofing

We could not gain access to the roofs during this survey. We brought a twenty foot extension ladder and were unable to reach the roof with this ladder. It is likely that the roofing is in good condition, however we were not able to determine if this is the case, therefore sometime prior to submitting the demolition permit the roof will need to be assessed.

### **Floor Coverings**

Floor coverings were accessed by cutting through the carpeting and through layers of multiple layers of tile etc... However, in the upstairs apartment of 928 Broadway there is a Pergo-style floor that is in very good condition. We did not attempt to discover if there is another type of

805 Capital Commons Drive Toledo, Ohio 43615 Telephone (419) 537-6000 Fax (419) 537-8774

flooring beneath this material as to do so would have ruined the floor. Additionally, there was a false floor or raised floor platform on the first floor at 932 Broadway; we did not look under this floor. Other than those two places we attempted to check under every carpet and under all installed floor coverings.

### **Braided Electrical Wiring**

Due to the age of the buildings it is likely there are various amounts of asbestos containing braided electrical wiring. This material was not sampled, but is presumed to contain asbestos and is non-friable Category I. This material may remain during demolition.

### General Information about asbestos containing materials

Some uses of asbestos containing materials were banned in the 1970's and 1980's, these include: sprayed-on fireproofing, Thermal System Insulation (pipe or duct insulation), asbestos paper products, flooring felts and new uses of asbestos; however, a more thorough proposed ban by the USEPA was successfully fought by a group of industrial attorneys. Products not currently banned include: asbestos cement corrugated sheet, asbestos clothing, pipeline wrap, roofing felt, vinyl-asbestos floor tile, asbestos cement shingles, millboard, gaskets, non-roofing coatings and roofing coatings. However, the reality is that relatively few asbestos containing building materials have been manufactured or installed in the US in the past twenty years due to product liability issues.

### Asbestos-Containing Materials and their Classification

The USEPA uses the terms friable and non-friable to categorize different types of asbestos-containing building materials. Materials that contain more than 1% asbestos and that, when dry, can be reduced to a powder via hand pressure are considered friable or RACM. These materials, if they are to be disturbed, must be removed by a licensed asbestos abatement contractor.

### The term RACM includes:

- Friable asbestos-containing materials;
- Category I non-friable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading;
- Category II non-friable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to a powder by the forces expected to act upon the material in the course of demolition or renovation operations.

Non-Friable Category I materials include floor tiles and roofing felts. Normally, Category I non-friable materials do not become friable unless they are sanded, abraded, or ground-up.

Non-Friable Category II materials are cement products such as Transite shingles, corrugated Transite panels, and other products made with a mixture of Portland cement and asbestos and asbestos containing mastics used or applied to flooring or roofing. It is important to note that

805 Capital Commons Drive Toledo, Ohio 43615 Telephone (419) 537-6000 Fax (419) 537-8774

many Non-friable Category II materials can be made friable through the forces expected to act upon them during demolition of a structure. Almost all Category II non-friable materials except mastics must be removed from a structure prior to demolition.

Intact as defined by OSHA means "the ACM has not crumbled, been pulverized, or otherwise deteriorated so that the asbestos is no longer likely to be bound with its matrix."

### Sampling Methodology

OSHA adopted the USEPA's sampling guidelines as outlined in the Asbestos Hazard Emergency Response Act of 1986.

According to AHERA protocol friable materials are divided into two categories:

- 1. Surfacing Materials: fireproofing, acoustical plaster, etc.
- 2. Thermal System Insulation: pipe insulation, pipe wrap, block insulation, batt insulation and mudded fittings.

Non-friable materials are included under:

Miscellaneous Materials: these include non-friable and friable materials that are not Surfacing Materials or Thermal System Insulation, such as: ceiling tile, drywall-joint compound systems, floor tile and mastic, roofing materials and Transite (cement products).

Under these rules, sampling areas are divided into homogeneous areas. Homogeneous areas or materials are defined as building materials that look alike, that appear to have been installed at the same time, and that are used for the same purpose.

When sampling surfacing materials the following protocol applies: the regulations require a specific number of samples be obtained per homogeneous area. For example, when sampling fireproofing or asbestos in hard plaster (sprayed-on or troweled-on Surfacing Materials) samples are to be taken based on the following increments:

- 0 to 1000 square feet of material, 3 samples are necessary;
- From 1001 to 5000 square feet, 5 samples are necessary;
- Over 5000 square feet, 7 samples are required.

If during analysis any samples are found to contain asbestos, the entire homogeneous area is delineated as asbestos-containing material.

When sampling Thermal System Insulation the following protocol applies: At least three (3) random samples shall be collected. As with all things there are exceptions to these rules. These include:

- Exception 1: Patch less than six square or linear feet 1 sample is appropriate.
- <u>Exception 2</u>: Mudded fittings the number of samples collected is determined by the inspector (the industry standard is three samples).

805 Capital Commons Drive Toledo, Ohio 43615 Telephone (419) 537-6000 Fax (419) 537-8774

• <u>Exception 3:</u> Fiberglass, foam glass, rubber (*Armaflex*), *Styrofoam*, and other non-suspect materials can be determined by visual identification and touch; sampling is not required.

When sampling for Miscellaneous Materials-the AHERA regulations state that the samples shall be collected in a manner sufficient to determine the composition of the materials. The 3, 5, 7, sampling scheme used for surfacing materials usually applies and for factory made materials two or three (2 or 3) samples are usually considered sufficient.

The samples were collected from locations that were selected to be representative of the building materials. Sampling of surfacing materials was accomplished in a statistically random manner that was representative of the homogeneous area. Locations of individual samples are referenced on the chain of custody etc...

### Sampling

The samples taken from this building were either collected with a coring tool designed for asbestos sampling or placed into a plastic bag for laboratory analysis. The samples were analyzed via PLM with dispersion staining, using the "Interim Method for the Determination of Asbestos in Bulk Insulation Samples" found in Appendix A to Subpart F in 40 CFR Part 763. The samples were analyzed by SanAir Technologies Laboratory, located at 1551 Oakbridge Drive, Suite B, Powhatan, VA 23139. SanAir Technologies Laboratory, Inc. participates in the National Voluntary Laboratory Accreditation Program (NVLAP).

The results of the sampling are presented on the following pages:

928 Broadway   306-1   Basement, North Half, Ceiling/Drywall   no asbestos detected   306-2   Basement, North Half, Ceiling/Drywall   no asbestos detected   306-3   Basement, North Half, Ceiling/Drywall   no asbestos detected   306-3   Basement, South Half, East Side, Ceiling/Hard Plaster, Plaster   no asbestos detected   306-4   Basement, South Half, East Side, Ceiling/Hard Plaster, Plaster   no asbestos detected   306-5   Basement, South Half, East Side, Ceiling/Hard Plaster, Plaster   no asbestos detected   306-5   Basement, South Half, East Side, Ceiling/Hard Plaster, Plaster   no asbestos detected   306-6   Basement, South Half, Center, Ceiling/Hard Plaster, Skim Coat   no asbestos detected   306-6   Basement, South Half, Center, Ceiling/Hard Plaster, Skim Coat   no asbestos detected   306-7   Basement, South Half, West Side/Hard Plaster, Plaster   no asbestos detected   306-7   Basement, South Half, West Side/Hard Plaster, Skim Coat   no asbestos detected   306-8   Basement, South Half, West Side/Hard Plaster, Skim Coat   no asbestos detected   306-8   Basement, South Half, West Side/Hard Plaster, Skim Coat   no asbestos detected   306-9   Basement, North Half/9" Floor Tile, Floor Tile   3% Chrysotile   no asbestos detected   306-9   Basement, North Half/9" Floor Tile, Mastic   no asbestos detected   306-9   Basement, North Half/9" Floor Tile, Mastic   no asbestos detected   306-10   Basement, North Half/9" Floor Tile, Mastic   no asbestos detected   306-10   Basement, North Half/9" Floor Tile, Mastic   no asbestos detected   306-11   Basement, South Half, West Side/Hard Plaster, Skim Coat   no asbestos detected   306-10   Basement, North Half/9" Floor Tile, Mastic   no asbestos detected   306-11   Basement, South Half/9" Floor Tile, Mastic   no asbestos detected   306-12   Basement, South Half/9" Floor Tile, Mastic   no asbestos detected   306-12   Basement, South Half/9" Floor Tile, Mastic   no asbestos detected   306-12   Basement, South Half/9" Floor Tile, Mastic   no asbestos detected   306-12   Ba	Sample #	Location/Material	% Asbestos

### Point Count Analysis

The samples denoted with an asterisk (\*) were further analyzed via point counting. When a bulk sample of material is found to contain 10% asbestos or less, the sample may be presumed to contain greater than 1% asbestos and treated as such or the sample can be analyzed via Point Counting.

This additional step is employed to more accurately determine the percent of asbestos that is in the material being sampled. Additionally, samples analyzed via PLM frequently are determined to contain "trace" amounts of asbestos usually written as <1% asbestos. Any sample determined to contain <1% asbestos must be point counted to prove it contains less than 1% or be assumed to be an Asbestos Containing Material.

The samples were analyzed utilizing positive stop — when one (1) sample in the same Homogenous Area was identified to contain asbestos in quantities over 1% the analysis was halted. Positive stop analysis was employed in order to save time and money.

The results of the point count analysis are as follows:

Sample #	Location/Material	Point Count Results		
	928 Broadway			
306-9	Basement, North Half/9" Floor Tile, Floor Tile	2.9% Chrysotile		
306-10	Basement, North Half/9" Floor Tile, Floor Tile	NA-PS

Key: NA-PS = Not Analyzed, Positive Stop				

On November 11, 2014 HazCorp personnel revisited the site in order to further delineate the building materials.

The following samples were collected and analyzed:

Sample #	Location/Material	Result
	936 Broadway	
306-119	Front Unit, Showroom Area, Partition Wall, West Wall/DW-JC, Drywall	no asbestos detected
306-119	Front Unit, Showroom Area, Partition Wall, West Wall/DW-JC, Joint Compound	no asbestos detected
306-120	Front Unit, Showroom Area, Partition Wall, West Wall/DW-JC, Drywall	no asbestos detected
306-120	Front Unit, Showroom Area, Partition Wall, West Wall/DW-JC, Joint Compound	no asbestos detected
306-121	2 <sup>nd</sup> Floor, Showroom, East Half, Partition, West Wall near Apt Entrance (White Wall)/DW-JC, Drywall	no asbestos detected
306-121	2 <sup>nd</sup> Floor, Showroom, East Half, Partition, West Wall near Apt Entrance (White Wall)/DW-JC, Joint Compound	no asbestos detected
306-122	2 <sup>nd</sup> Floor, Showroom, South Half, Partition, North Wall (Burgundy Wall with adjoining Floral Wallpapered Wall)/DW-JC, Drywall	no asbestos detected
306-122*	2 <sup>nd</sup> Floor, Showroom, South Half, Partition, North Wall (Burgundy Wall with adjoining Floral Wallpapered Wall)/DW-JC, Joint Compound	<1% Chrysotile
306-123*	Exterior/Caulk by Rear Opening Doors	4% Chrysotile
306-124*	Exterior/Caulk by Rear Opening Doors	4% Chrysotile

The samples with an asterisk (\*) were even further delineated to prove their asbestos content. The results of the point count are:

Sample #	Location/Material	Point Count Results	
	936 Broadway		
306-122	2 <sup>nd</sup> Floor, Showroom, South Half, Partition, North Wall (Burgundy Wall with adjoining Floral Wallpapered	0.75% Chrysotile	
	Wall)/Joint Compound		
306-123	Exterior/Caulk by Rear Opening Doors	1.25% Chrysotile	
306-124	Exterior/Caulk by Rear Opening Doors	NA-PS	
NA-PS = Not Analyzed/ Positive Stop			

805 Capital Commons Drive Toledo, Ohio 43615 Telephone (419) 537-6000 Fax (419) 537-8774

### **Conclusions**

Based on the laboratory analysis the following building materials are considered asbestos containing materials and must be properly handled if they are to be disturbed during renovation or demolition:

### 928 Broadway

- 1,275 square feet of drywall with ACM joint compound applied to the seams and nails in the 2<sup>nd</sup> Floor addition rear of the building.
- Approximately 6 square feet of Transite board on electrical panel in basement.
- The caulk around the door openings on the rear of the building.

#### 932 Broadway

- 9,000 square feet of drywall with ACM joint compound applied to the seams and nail heads.
- 4,275 square feet of floor tile in the basement beneath the carpet.
- 1 cubic foot of caulk/glaze around windows.
- The caulk around the door openings on the rear of the building.
- 1 cubic foot of ACM caulk applied to the boiler.
- 110 linear feet of Presumed ACM 8-inch aircell pipe insulation in basement.
- 3 linear feet of Presumed ACM 8-inch aircell pipe insulation and ACM debris on piping at rear of first floor.

### 936 Broadway

- The 1,650 square feet of 9" floor tile and mastic on the 1<sup>st</sup> floor.
- The caulk around the door openings on the rear of the building.

### Alley Building

34 windows or doors, mostly blocked up, with ACM caulk remaining around the openings.

HazCorp is not informed of the plans made for these buildings; therefore we did not attempt to determine which materials would need to be removed during renovation or demolition of these structures.

With regard to renovation: there are no rules requiring arbitrary removal of asbestos containing materials. Under current rules and regulations these materials may remain in these structures indefinitely.

With regard to demolition: those materials which would be rendered friable (or reduced to a powder creating airborne dust) should be removed prior to demolition. However, floor tile and mastic do not have to be removed as long as they are in good condition and will not become friable during demolition. Materials which may become friable would need to be removed.

805 Capital Commons Drive Toledo, Ohio 43615 Telephone (419) 537-6000 Fax (419) 537-8774

Please find included with this letter: the photographic log, asbestos location maps, the laboratory analytical results from SanAir Technologies Laboratory, Inc. and the completed chain of custody forms.

### Limits of this Report

It should be noted that on-site conditions and/or regulatory statues, rules, and regulations are not static and should not be expected to remain constant in the future. Asbestos may be hidden in inaccessible areas, covered by other building materials, or otherwise be located in unpredictable site-specific locations; however, a thorough attempt was made to delineate which building materials actually contain asbestos. If suspect materials are encountered in the demolition process the work should be halted and the material in question analyzed.

HazCorp appreciates the opportunity to be of service. If you have any questions related to this report please feel free to contact me at hazcorp@sbcglobal.net or 419.537.6000.

### **Disclaimer**

The final report cannot be reproduced, except in full, without written authorization from SanAir. Fibers smaller than 5 microns cannot be seen with this method due to scope limitations. The accuracy of the results is dependent upon the clients sampling procedure and information provided to the laboratory by the client. SanAir assumes no responsibility for the sampling procedure and will provide evaluation reports based solely on the sample and information provided by the client. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government.

For NY state samples, method EPA 600/M4-82-020 is performed.

Polarized- light microscopy is not consistently reliable in detecting asbestos in floor covering and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.

Dear Charles Long,

We at SanAir would like to thank you for the work you recently submitted. The 6 sample(s) were received on Wednesday, November 12, 2014 via FedEx. The final report(s) is enclosed for the following sample(s): 306-119, 306-120, 306-121, 306-122, 306-123, 306-124.

These results only pertain to this job and should not be used in the interpretation of any other job. This report is only complete in its entirety. Refer to the listing below of the pages included in a complete final report.

Sincerely,

Sandra Sobrino

#### **Disclaimer**

The final report cannot be reproduced, except in full, without written authorization from SanAir. Fibers smaller than 5 microns cannot be seen with this method due to scope limitations. The accuracy of the results is dependent upon the clients sampling procedure and information provided to the laboratory by the client. SanAir assumes no responsibility for the sampling procedure and will provide evaluation reports based solely on the sample and information provided by the client. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government.

For NY state samples, method EPA 600/M4-82-020 is performed.

Polarized- light microscopy is not consistently reliable in detecting asbestos in floor covering and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.

Dear Sir or Madam,

Please perform point counting utilizing positive stop (over 1% asbestos) on the samples below:

HazCorp Project #2014-306 • SanAir ID: 14031441 • Project Name: 928, 932, & 936 Broadway Ave.

SanAir ID#	HazCorp #	HazCorp # Description	Item Requested
14031441-004	306-122	2 <sup>nd</sup> Floor, Showroom, South Half, Partition, North Wall (Burgundy Wall with adjoining Floral Wallpapered	<1% Chrysotile
		Wall/DW-JC	
14031441-005	306-123	Exterior/Caulk by Rear Opening Doors	4% Chrysotile
14031441-006	306-124	Exterior/Caulk by Rear Opening Doors	4% Chrysotile

Please perform the analysis under 24-hour turnaround. Please perform NOB where applicable.

Respectfully,

John Campbell

HazCorp Environmental Services, Inc.
